

# Cardiac Structure and Function - What we know, and what we thought we knew

Peter Agger

*Department of Clinical Medicine,  
Physiology, Aarhus University*

Myocardial morphology has been subject to passionate investigation for several centuries. In spite of that, the 'true myocardial architecture' in mammals is still today a matter of intense debate within the scientific communities. Taking the history of research in myocardial morphology as a point of origin I will outline the current stand in the field emphasising that not all so-called common knowledge of the heart is backed up by scientific evidence.

**Friday, December 3<sup>rd</sup> at 13.00**  
**Zoophysiology Seminar Room (1131-127)**
